## **AFFORDABLE & CLEAN ENERGY**

Misamis University has invested in clean energy by installing solar panels across several campus buildings and on the newly constructed Activity Center. These can be seen around newly developed areas, including walkways and other outdoor spaces, allowing the campus to produce clean and renewable power. The university also supports affordable and efficient energy use by switching old bulbs to LED lights and adding inverters to air-conditioning units and other equipment. The Misamis University Medical Center has likewise installed its own solar panels, showing the institution's steady move toward more sustainable energy practices.
